Steve,

Here is a JPG that shows the coordinates of the proposed drill site. This was what I was trying to do earlier. You will have to show me how you managed to import that screen shot into Google Earth and make it seamless. I tried to teach myself that a few months ago, but was unsuccessful. Thanks

We don't use gis out in the field offices. The .kmz file that I had attached is a file generated from Google Earth.

Steven,

I have been trying to unzip the file and plot it on gis, but have not had much luck so far. I went ahead and attached the zip file, maybe you have better luck.

Patrick:

Delia really came through for me on getting this aerial photo of the June 30, 2014 high flow event. I took the aerial photo and created an overlay in the attached .kmz file. As you can see the proposed oil drilling site (#1) is located outside the limits of the this 250 to 500 cfs flow event. Call me when you get a chance and we can discuss further.

Delia:
Thanks again for your help on this.

Steve
